OMG

Space-Time-Travel

- Cell phones are generating a staggering amount of geo-locational data – 600B transactions per day being created in the US alone
- This data is being “de-identified” and shared with third parties – in volume and in real-time
- Your movement quickly reveals where you spend your time
- Re-identification (figuring out who is who) is somewhat trivial
- And, oh so powerful predictions ...

The 10 People I Spend the Most Time With (Not at Home and Not at Work)

- Michelle
- Renee
- Peggy
- Erin
- Joshua
- Ivan
- Bob
- Amanda
- Dane
- Wesley

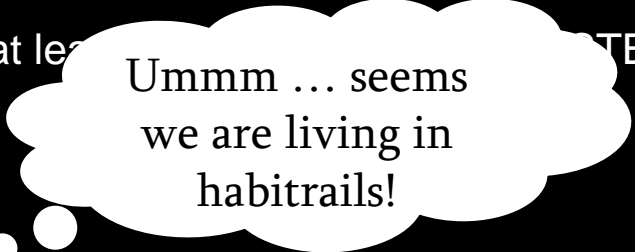

He must be
following me!

Unfair Advantage?

- The Uberstan intelligence service preempts the next mass protest in real-time
- A political opponent is crushed and resigns two days after announcing their candidacy

Toying with Publically Available Cell Phone Data

- 35,831 Call Data Records (CDRs)
 - 6 months: From 08-31-2009 through 02-27-2010
- 18,391 Total Number of Usable CDR's
 - Excluded CDRs with missing latitude, longitude, time, flow, or accuracy > 250 meters
- 2,444 Hangouts
 - Minimum of 2 events, spanning at least 100 meters
- The Pattern of Life
 - 130 Hangouts total
 - 64 Hangouts 3 or more times

Ummm ... seems
we are living in
habitrails!

June 12th, 2015

Hi Jeff & the gang,

I have great news! On Tuesday I happened to observe a close encounter you guys predicted - one 1 km and the other one 2 km in diameter!

To my knowledge this is the first case ever of direct observation of a close encounter in the small main belt asteroids. The closest point of encounter unfortunately happened during bright daylight in Hawaii, so I missed it ...

Cheers!
Eva -
